

Creating Accessible Online Content

Webinar Handout – April 29, 2026

Accessible digital content is designed so a wide range of people and abilities can use your information. This includes people with learning, physical, and vision limitations. More than 70% of Americans use social media to get news and information, stay connected with friends, or for fun. This webinar will present best practices for creating accessible content for social media posts, images, and videos. We will also provide an overview of the WCAG. These are the international standards for making web content accessible to people with disabilities.

Color Contrast

Excluding logos or brand names, it is best to maintain a contrast ratio of 4.5:1 for regular text and 3:1 for large text. This ratio is the minimum required for federal content creators. More information and useful color contrast analyzers:
